

GOALIE: low-fidelity wireframes for key user actions

Draft · based on tig/goalie @ main (SPEC Draft 0.2, USERS_MANUAL v0.1, ADRs 0001–0011, issues #1–#36). Grayscale, low fidelity. Labels use GOALIE's own lexicon.

Key actions, in order

#	Action / screen	Surface	Source in repo
01	First run: owner sets up the deployment (assumed)	Web app · owner	Epic 11 #13 (configure, load org tree, priority lists, manual); Epic 13 #14 (deploy and run first review from docs alone); ADR 0005 (federated sign-in); SPEC §11, §12
02	Work between reviews: My goals (home)	Web app · desktop	SPEC §1.2, §8.2 (standard views, default columns/sort); USERS_MANUAL App. A "Work between reviews"; Epic 7 #8
03	Org overview and org-unit views	Web app · desktop	SPEC §8.2 (organization overview; one view per org unit), §6.2 (org tree as data), §6.3; Epic 7 #8
04	Open a goal and read it	Web app · desktop	SPEC §1.2, §6.1 (fields), §6.6 (comments), §6.9 (Draft); USERS_MANUAL App. A "Work between reviews"; Epic 7 #8
05	Create a goal	Web app · desktop	USERS_MANUAL App. A "Create a goal"; SPEC §5 promotion rule, §6.1; Epic 7 #8 ("goal editing shows the rules as you go"); Epic 8 #9 (draft Promotion Milestone)
06	Report trouble: set YELLOW and write the PTG	Web app · desktop	USERS_MANUAL App. A "Report trouble"; SPEC §6.1 health + path_to_green; rule 8; Epic 7 #8
07	Two people, one goal: stale write rejected	Web app · desktop	SPEC §1.2 (two actors, one goal), §6 (versions; stale write rejected, current state returned), rule 10–11; ADR 0003, 0008
08	Record a slip	Web app · desktop	USERS_MANUAL App. A "Record a slip"; SPEC §5, §6.1 (original_committed_date, changed_due_date), rules 5–7
09	Promote a date (commit)	Web app · desktop	USERS_MANUAL App. A "Promote a date"; SPEC §5, §6.1 (committed_plan_version), §7.1; Epic 6 #7 (pin on promote)
10	Approve or reject an agent Draft	Web app · desktop	USERS_MANUAL App. A "Approve or reject a Draft"; SPEC §6.9, §10, rule 12; Epic 8 #9
11	Write the linked plan (collaborative Doc)	Web app · desktop	SPEC §6.5 (Doc is a page; concurrent edit; versions), §1.2; Epic 6 #7; ADR 0008 (Yjs CRDT)
12	Read a goal's history	Web app · desktop	SPEC §6.6 (Events readable on the record; follow a goal across the period), §8.1 (status-theater flag); USERS_MANUAL App. A step 6; issue #31
13	Close a goal	Web app · desktop	USERS_MANUAL App. A "Close a goal"; SPEC §7.2 (state lifecycle, closing rule), §8.1 (Deleted stays findable)
14	Promotions due	Web app · desktop	SPEC §8.2 (Promotions due, default 2 weeks), §5; USERS_MANUAL §6 step 5; Epic 8 #9 (reminders)
15	Priorities: ranked list, cut line, re-rank	Web app · desktop	SPEC §6.3 (ranked, unique ranks, cut line, lints), §3.13, §8.3 starvation; USERS_MANUAL App. A "Re-rank priorities"; Epic 10 #11
16	Hygiene view	Web app · desktop	SPEC §8.1 (invalid records stay visible; lints flagged not blocked), §8.3 hygiene; USERS_MANUAL §4; Epic 8 #9 (hygiene agent)
17	Prepare a review: review page and agent pre-read	Web app · desktop	Epic 10 #11 (review calendar, review pages, pre-reads); USERS_MANUAL §5, §7, App. B; SPEC §9, §10 (review prep)
18	Run the review: walk the view line by line	Web app · desktop	Epic 10 #11 (review mode, decisions and action items as Events); USERS_MANUAL §6; SPEC §9; Epic 7 #8 done-when (run default review end to end in the app)
19	Scorecard and GOALIE health (fitness functions)	Web app · desktop	Epic 9 #10 (rollups, scorecard, GOALIE health page); SPEC §8.3; USERS_MANUAL §7–8
20	Period reset	Web app · desktop	SPEC §7.3, §3.12; USERS_MANUAL App. A "Period reset", §5 (year end)
21	Make a view: saved, shareable definition	Web app · desktop	SPEC §8.2 (view = screen + saved definition; filters), §13 items 7 & 28; Epic 7 #8 (saved, shareable views)
22	File and track work items (optional extension)	Web app · desktop	SPEC §6.7; Epic 12 #12 (work items, intake, GitHub import, evidence for health); USERS_MANUAL App. A step 5
23	Read and maintain the User's Manual	Web app · desktop	SPEC §11 (hosted, versioned, linked from views and goal creation; agents' instructions); Epic 6 #7 (filled from config; changelog drafted); USERS_MANUAL.md
24	Settings: my settings and owner settings	Web app · desktop	SPEC §12 (owner vs user settings); ADR 0011; Epic 7 #8 (user settings); Epic 13 #14 (all settings without touching code)
25	Phone width: My goals, approve a Draft, comment	Mobile web (phone browser)	ADR 0010 (one web app; same pages usable at phone width; no native app); SPEC §1 (web and mobile); Epic 7 #8 (accessible, phone-sized)
26	Agent surface: an agent works GOALIE over MCP	Agent · MCP (CLI/chat)	Epic 5 #6 (MCP tools for each App. A how-to; Drafts; comments; errors name the rule; manual as resource); ADR 0004, 0005, 0007; SPEC §1.1, §10, §13 items 8, 21–22

Excaliwire tenets applied

- **Delight Is Low Friction / remove steps before adding features:** one-screen create (05), inline Promotion Milestone, combined slip+health+PTG (08), bulk period reset (20), no Save on Docs (11), Drafts approved in place (02/04/10).
- **Self Service Or Nothing** (proposed tenet, operations#56): no GOALIE accounts, invites, or demo. Defaults first (01). Agents handle the bookkeeping over MCP (26).
- **Design For Failure:** stale-write recovery (07), SSE resume by sequence, plain-language rejections that name the rule (26).
- **Customers Own Their Data:** one-click full export (19). The history is readable on every record (12).

Assumptions

- Platform per ADR 0010: one server-rendered web app, the same pages at phone width, no native app. The agent surface is MCP (ADR 0004).
- Sign-in is federated Entra ID behind oauth2-proxy (ADR 0005), so there's no GOALIE sign-in, sign-up, or password screen. Frame 01's first-run checklist *shape* is assumed. The repo requires the steps, not the screen.
- Sample data (GOAL ids, Factory/Product/Operations units, Pat as a second human, agent names) is illustrative. ADR 0005's first deployment has one human actor (Tig).
- Specific UI choices marked *assumed* in frame annotations: worst-child health rollup (03), derived Completed vs Completed Late (13), enforced owner and date on action items (18), pre-filled period-reset reasons (20), the ⓘ marker when the date-type column is hidden (21).
- Left nav order and the favorites/reviews sections are a design choice. The views themselves are the SPEC §8.2 standard views.

Open product questions

1. **01 First run: owner sets up the deployment:** Is an agent allowed to Draft the org tree from Entra groups, or does a human always enter it in the app? The spec is silent.
2. **03 Org overview and org-unit views:** How should health roll up across the tree (worst child, owner-set, or none)? SPEC §8.3 rollups don't define a unit-level health.
3. **05 Create a goal:** Should the UI pre-fill the milestone itself, or always leave it to the drafting agent's Draft per #9? Pre-filling removes an approval step.
4. **06 Report trouble: set YELLOW and write the PTG:** SPEC §8.1 says a violating save is either rejected or opens a Draft for the owner. For human edits in the UI, is it always reject-inline?
5. **08 Record a slip:** Should a slip, health change, and PTG save as one Event or one Event per field? Rule 10 says one write at a time per structured field.
6. **10 Approve or reject an agent Draft:** Is "Edit, then approve" allowed (does it become a human write rather than an approval)? The spec only names approve or reject.
7. **11 Write the linked plan (collaborative Doc):** Is plan_maturity set by the owner on the goal, or on the Doc? SPEC puts it on the goal; the editor needs to show it in both places.
8. **13 Close a goal:** Should GOALIE derive Completed vs Completed Late automatically, or let the owner pick and lint the mismatch?
9. **15 Priorities: ranked list, cut line, re-rank:** Is re-ranking outside a scheduled review blocked, warned, or allowed? It's a norm, so it probably shouldn't be blocked.
10. **17 Prepare a review: review page and agent pre-read:** Who receives the pre-read and how (in-app only, or email via the M365 tenant)? The spec says pre-reads "go out" but names no channel.
11. **18 Run the review: walk the view line by line:** Is an action item a work item, a goal, or a new record? The spec and #11 call action items Events but define no entity; this affects the data model.
12. **20 Period reset:** Do pre-filled reasons satisfy "a written reason", or must each be typed by a human to avoid reason theater?
13. **22 File and track work items (optional extension):** Can a work item exist with no goal (true backlog intake), or must it link to one? #12 says it "links to a goal"; Excaliwire's backlog today has many unlinked issues.
14. **25 Phone width: My goals, approve a Draft, comment:** What's the mobile scope: triage only (approve, comment, health), or full parity including priority re-rank and plan editing?
15. **26 Agent surface: an agent works GOALIE over MCP:** Which agent actors does Excaliwire register first (drafting, hygiene, review, manual), and who is each one's operator? USERS_MANUAL §3 leaves <list agents and operators> blank.

01

First run: owner sets up the deployment

Source: Epic 11 #13 (configure, load org tree, priority lists, manual); Epic 13 #14 (deploy and run first review from docs alone); ADR 0005 (federated sign-in); SPEC §11, §12

Import the open company tickets from excaliwire/factory?6

Import from GitHub

Create a goal

☐ First review

Pick a cadence; GOALIE creates the review page.

ANNOTATIONS

1

Shape of this screen is assumed; the repo requires the steps, not a checklist. Sign-in is Entra via oauth2-proxy, so GOALIE has no sign-in or sign-up page at all.

2

Every SPEC §12 owner setting starts at its default. Nothing must be configured before first use.

3

Org tree is data with one human owner per unit (SPEC §6.2). An agent may Draft it; the owner approves.

4

Priority lists per SPEC §6.3. Links to frame 15.

5

Manual pre-filled from configuration (#7). Remaining blanks stay visible as a checklist item.

6

Import from GitHub Issues is in Epic 12 #12 scope; offered here because Excaliwire's backlog lives in factory issues today.

TENETS APPLIED

Self-serve, remove steps: no account creation, no invite emails (identities come from Entra), no demo. Defaults first, change later. The deployment is usable the moment the org tree exists.

OPEN QUESTION

Is an agent allowed to Draft the org tree from Entra groups, or does a human always enter it in the app? The spec is silent.

GOAL -31 Retire GitHub Issues for company tickets	In Progress	GREEN	Jan 29 Ambition	GOAL-33 · Oct 30	Tig	—
GOAL -23 Ship EPLAN export pack	Backlog	—	Jun 30 Fantasy	GOAL-24 · Dec 15	Tig	—

2 Drafts wait for you4 · drafting-agent proposed a PTG on GOAL-40 · a Promotion Milestone on GOAL-23

Presence5 : Pa Pat viewing GOAL-12 · Hy hygiene-agent (op. Tig) reading GOAL-12 Updated 0.4 s ago · seq 18,2046

- ANNOTATIONS
- 1

Home surface. A view is a screen plus a saved definition (owner, columns, sort), never a DB view.
- 2

Default sort RED → YELLOW → GREEN. Rows are clickable; Plan and Work Product are one click away from the goal.
- 3

Date type badge on every date: solid = Committed, gray = Ambition, dashed = Fantasy. A changed date shows the original under it.
- 4

Pending Drafts addressed to me surface here, so approving them doesn't need its own inbox.
- 5

Presence: humans as round avatars, agents as square dashed ones labeled with their operator. Presence is not an Event.
- 6

Live: committed changes land within 1 s via SSE. On reconnect the client resumes from the last sequence; no refresh button.
- TENETS APPLIED
- Low friction:

one screen holds everything a goal owner needs between reviews: their goals, what's wrong, and what's waiting on them. No separate notification inbox, no refresh.

03

SUMMARY	HEALTH	DUE DATE	PROMOTION MILESTONE	PRIORITY
GOAL - 12 Launch self-serve factory runs	RED	Mar 31 Ambition	GOAL-19 Nov 15	PRI-1 Self-serve end to end
GOAL - 40 Reduce canon review time to 10 min	YELLOW	Dec 18 Committed	—	PRI-1
GOAL - 47 Pass quality bar on instrument cluster	GREEN	Nov 30 Committed	—	PRI-2 Canon quality
GOAL - 23 Ship EPLAN export pack	Backlog	Jun 30 Fantasy	GOAL-24 Dec 15	PRI-5 below cut3

Goal-type mix: 2 Launch · 1 Metric (Ops) · 1 Commit4

Date types: 2 C · 1 A · 1 F

ANNOTATIONS

1

Org overview: the tree is data. Clicking a unit opens that unit's own view (also in the left nav).

2

Rollup shows the worst child health so a RED never hides behind a GREEN parent. Rollup rule is assumed.

3

Goals under a priority below the cut line are marked, so the starvation is visibly deliberate.

4

Mix chips let reviewers check whether a unit has the right mix of goal types (SPEC §6.1 type).

TENETS APPLIED

Low cognitive load: one view, filter chips instead of a report builder. Rollup computed, never typed in.

OPEN QUESTION

How should health roll up across the tree (worst child, owner-set, or none)? SPEC §8.3 rollups don't define a unit-level health.

04

Open a goal and read it

Comments (3)

History (41)

Work items (6)

Tig · 2h · Vendor quote came back; see plan §3.

hygiene-agent · 1d · GOAL-19 passed Nov 15 unmet → RED.

Add a comment...4

ANNOTATIONS

1

A pending Draft shows live on the goal, clearly marked as not in effect.

2

All SPEC §6.1 fields. A trigger-set value says why. Plan and Work Product are one click.

3

Description is collaborative Markdown. Lints show inline and never block.

4

Comments are flat: there's no Reply button in v1, by rule. A comment is an Event.

TENETS APPLIED

Low friction:

no separate read and edit pages. Edit opens in place (frame 06), and the reason a value changed sits next to the value.

05

Create a goal

PLAN (OPTIONAL NOW)

Start from 5Ps template · or paste a link4

DESCRIPTION

Key results · metrics · why it matters · who shares it

Committed would require a Pencil plan; this stays editable later.5

Cancel

Create GOAL-12

ANNOTATIONS

- 1 One form, not a wizard. Org unit and owner default from context (the current view, you).
- 2 Date type is a required, honest choice. There's no default, so nobody commits a date by accident.
- 3 Choosing Ambition or Fantasy expands the Promotion Milestone in place, pre-filled. Saving creates both goals in one transaction. Choosing Committed instead asks for a Pencil plan.
- 4 The 5Ps template is one click (#7). External links are allowed.
- 5 Rules are checked as you type, and the server re-checks on commit. Create stays disabled while a hard rule is unmet.

TENETS APPLIED

Remove steps before adding features: the manual's 6 steps fit on one screen. The milestone is filled inline, not by a Draft round trip afterwards (the agent Draft in #9 stays the fallback for API-created goals).

OPEN QUESTION

Should the UI pre-fill the milestone itself, or always leave it to the drafting agent's Draft per #9? Pre-filling removes an approval step.

06

Report trouble: set YELLOW and write the PTG

Reduce canon review time to 10 minGREEN

Pa

Hy

Owner Tig · Program or Function · Milestone (Launch) · sev1 · PRI-1 · due Dec 4Committed

HealthGREENYELLOWRED1

Path to Green (required for YELLOW)2

#	STEP	OWNER (HUMAN)	DATE
1	Batch reviewer UI ships behind flag	Tig	Nov 6
2	Measure 20 jobs, publish median	Tig	Nov 20
+ Add step			

CRITERIA FOR RETURNING TO GREEN (TESTABLE)

Median review time ≤ 10 min over 20 consecutive jobs

TRIGGER THAT TURNS IT RED3

Required for YELLOW

REASON FOR THE CHANGE4

Batch UI slipped 2 weeks; still a credible path to Dec 4.

Saving as v9 (you read v9)5

Cancel

Save

ANNOTATIONS

1Health is edited in place on the goal page.

2Choosing YELLOW or RED opens the structured PTG: steps with a human owner and a date each, plus criteria.

3The UI won't save until each required part is there. For YELLOW that includes the trigger to RED.

4Every state or date change needs a written reason, and it's stored on the Event.

5The save names the version it read, so a stale save is rejected (frame 07).

TENETS APPLIED

Make the right behavior the default: a structured PTG instead of free text means review readers never chase missing owners or dates.

OPEN QUESTION

SPEC §8.1 says a violating save is either rejected or opens a Draft for the owner. For human edits in the UI, is it always reject-inline?

07

Two people, one goal: stale write rejected

Source: SPEC §1.2 (two actors, one goal), §6 (versions; stale write rejected, current state returned), rule 10–11; ADR 0003, 0008

This goal changed while you were editing 1

You read v9. Pat saved v10 four seconds ago. Your change was not saved.

FIELD	V9 (WHAT YOU READ)	V10 (CURRENT)	YOUR EDIT
Health	GREEN	RED	YELLOW
Changed due date	—	Dec 18 · "vendor slip"	—
PTG	—	Pat's 2 steps	Your 2 steps

Description edits were merged: Markdown never conflicts 2

Discard mine

Re-apply my edit on v10 3

Re-apply re-opens the editor on v10 with your values pre-filled; you confirm and give the reason again. 4

- ANNOTATIONS
- 1

Structured fields are never auto-merged. A stale save is rejected and the current state comes back.
- 2

Markdown (description, plan) is a Yjs CRDT, so neither person's text is lost.
- 3

One click to carry your intent onto the current version. It's still a new write, with one actor and one reason.
- 4

No work disappears without an Event: the rejected attempt isn't saved, but your draft values are kept in the editor.

TENETS APPLIED

Design for failure: say plainly what happened and why, and make recovery one click. A conflict the user can't understand is a defect.

08

Record a slip

CHANGED DUE DATE

Dec 18, 2026 (+14 days)

REASON (REQUIRED)

Batch reviewer UI slipped; vendor OCR fix lands Nov 20.

Health

YELLOW

RED

PTG required 2

PTG editor (as in frame 06) opens here, pre-filled with the current PTG.

"Demote to Ambition" is not offered. A Committed date can't be demoted. 3

Record slip

- ANNOTATIONS
- 1

The Original Committed Date is locked and shown. Scorecards measure lateness against it.
- 2

A slip goes with health and a PTG in the same save, so the record is never half-updated.
- 3

There's no way to demote a Committed date. A slip is the only path.
- TENETS APPLIED
- Remove steps: slip, health, and PTG happen in one dialog and one write, instead of three edits with three reasons.
- OPEN QUESTION
- Should a slip, health change, and PTG save as one Event or one Event per field? Rule 10 says one write at a time per structured field.

09

Ambition

Promote date: Ambition → Committed1

Promotion Milestone GOAL-33 "Commit GOALIE cutover date" is due Oct 30, in 12 days.

Plan maturity check2

Watercolor

Crayon

Pencil

Open plan

A Committed date needs a Pencil plan. Push back on the plan, not the date.

AMBITION DATE

COMMITTED DATE3

Jan 29, 2027

Feb 12, 2027 (+14 d vs ambition)

REASON

Work-item import scoped; 2-week buffer for pilot data load.

On promote, GOALIE will: record Feb 12 as Original Committed Date · pin plan v7 as committed_plan_version · complete GOAL-33 · unlink it4

Cancel

Commit Feb 12 (needs Pencil)

Variant: Fantasy → Ambition. Same dialog; instead of the Pencil check it asks for the next Promotion Milestone (Ambition → Committed), pre-filled.5

ANNOTATIONS

1

Launched from the goal, from Promotions due, or in review mode.

2

Hard gate: Committed needs Pencil. The button says why it's disabled and links straight to the plan.

3

The promoted date can differ from the ambition date. The difference is shown and recorded.

4

Everything the system does on promote is spelled out before you confirm.

5

Fantasy → Ambition attaches the next milestone in the same step.

TENETS APPLIED

Low cognitive load: one dialog shows the rule, the gap, and the consequence. Nobody needs the manual open.

10

Approve or reject an agent Draft

Source: USERS_MANUAL App. A "Approve or reject a Draft"; SPEC §6.9, §10, rule 12; Epic 8 #9

Factory > GOAL-40 · v14

Reduce canon review time to 10 min

YELLOW

PaHy

Owner Tig · Program or Function · Milestone (Launch) · sev1 · PRI-1 · due Dec 18

Committed

Draft by Dr drafting-agent · operator Tig · based on v91

created 08:12 MT

FIELD	CURRENT (V9)	PROPOSED
Health	YELLOW	RED
PTG step 2	Measure 20 jobs · Nov 20	Measure 20 jobs · Dec 2

Agent's reason2: PR factory#1602 (batch UI) still open, 3 review rounds; median review time last 10 jobs is 23 min (dashboard link).

YOUR REASON (REQUIRED)3

Agree: the trigger fired.

Reject

Edit, then approve

Approve

If GOAL-40 changed after v94: "Approval rejected: this Draft was written against v9; the goal is now v10." Shows v10. You decide again from that state.

ANNOTATIONS

1

The Draft shows the agent, its human operator, and the base version. It's visible to everyone the moment it's created.

2

The agent's evidence is links to Work Product and metrics, not just text.

3

Approve and reject are both Events with your name and reason.

4

Approval is a write against base_version. If the goal has moved on, it's rejected and you see the current state.

TENETS APPLIED

Low friction:

approve in place from the goal or from My goals. "Edit, then approve" avoids the reject-and-redraft loop.

OPEN QUESTION

Is "Edit, then approve" allowed (does it become a human write rather than an approval)? The spec only names approve or reject.

11

Write the linked plan (collaborative Doc)

Retire GitHub Issues: plan (5Ps)

TK Pa Dr editing now2 History

Purpose

One place for goals and the work under them.

Principles

- Self-serve import; no re-typingTig

- GitHub stays Work Product, not the tracker

Priorities

1. Import open factory tickets

2. Agents pick up work items over MCPPat

People

Tig (owner), drafting-agent

Plan

| Step | Owner | Date |

| ---|---|---|

| Import dry run | Tig | Nov 6 |

Versions3

v12 · now (live)

v11 · Tig · Oct 1

v7 · 📌 pinned at commit

v1 · from 5Ps template

Maturity

Watercolor → Crayon → Pencil

Needed to commit GOAL-31.

4

- ANNOTATIONS
- 1

The plan is a hosted Markdown Doc linked to its goal, and its maturity is set here.
- 2

Several actors can type at once with live caret. Nothing is lost. No Save button: each accepted update is a version Event.
- 3

Version history. The version pinned at commit can always be opened as it stood.
- 4

Plan maturity is the gate for committing (frame 09).

TENETS APPLIED

Remove steps:

no save, no check-out, no "someone else is editing" lock. Starting from the 5Ps template saves the blank-page step.

OPEN QUESTION

Is plan_maturity set by the owner on the goal, or on the Doc? SPEC puts it on the goal; the editor needs to show it in both places.

12

Read a goal's history

Source: SPEC §6.6 (Events readable on the record; follow a goal across the period), §8.1 (status-theater flag); USERS_MANUAL App. A step 6; issue #31

CommentsHistory (41)Work items

AllDatesHealthDraftsCommentsAgents onlyPeriod 20261

hygiene-agent (agent · op. Tig) · Nov 16 00:00 · #18,190

Health GREEN → RED · "GOAL-19 committed date Nov 15 passed unmet"status theater flagged2

Tig · Oct 30 · #17,544

Comment: "Vendor quote came back."

Tig · Oct 2 · #16,902

Approved Draft #71 (drafting-agent) · "milestone date fine"3

drafting-agent · Oct 2 · #16,880

Draft #71: create Promotion Milestone GOAL-19

Tig · Oct 2 · #16,877

Created · date type Ambition · due Mar 31 · "initial"

Old → new value and the reason on every row. Deleted goals keep their history.4

- ANNOTATIONS
- 1

Filter by kind, by agent, or by period. Follow one goal across the whole plan period.
- 2

Trigger-driven changes and status-theater flags show in the same trail.
- 3

Draft creation and approval are separate Events with separate actors.
- 4

History is on the record itself. Export isn't the only way to audit it.
- TENETS APPLIED
- Get and use data:

the trail is the organization's memory. It's one tab away, and never a separate audit tool.

Pass quality bar on instrument clusterGREEN

PaHy

Owner Tig · Program or Function · Milestone (Launch) · sev1 · PRI-1 · due Mar 31Ambition

Close goal

CompletedCompleted LateDid Not MeetDeleted1

Original committedNov 30 · 🔒

Closing onNov 24 → on time (computed)2

REASON

Quality bar met on 3 consecutive runs; see dashboard.

If the date is still Ambition3: "Promote to Committed and complete in one step?" It's counted as completed without a prior commitment.

CancelClose as Completed

ANNOTATIONS

- 1Four closing states, each with a reason. Deleted goals stay findable along with their history.
- 2On time or late is computed against the original committed date, so the user doesn't choose it. Assumed: the UI derives Completed vs Completed Late.
- 3The closing rule's one-step promote-and-complete.

TENETS APPLIED

Remove steps: lateness is derived, not picked, so there's one less choice to get wrong.

OPEN QUESTION

Should GOALIE derive Completed vs Completed Late automatically, or let the owner pick and lint the mismatch?

drafting-agent reminded Tig about GOAL-33 on Oct 18 (comment on GOAL-31) 4

- ANNOTATIONS
- 1

A standard view of Promotion Milestones due within the window. Used daily and as review step 5.
- 2

Promote right from the row (frame 09). Plan maturity shows up front so a blocked promotion is visible early.
- 3

Missed milestones stay listed as RED, and their parent goal goes RED by trigger.
- 4

Agent reminders are comments, so they're on the record. No separate notification system.
- TENETS APPLIED
- Low friction:

each row is a decision with its action next to it, and every row needs one.

Company Factory Product

1 :: Self-serve end to end 4 goals · 61% of linked work
Starves: human review queue tooling 1

2 :: Canon quality bar 3 goals · 27%
Starves: new vehicle makes

3 :: Unit cost per job 1 goal · 9%
Starves: Industrial formats

----- CUT LINE: below is knowingly starved 2 -----

4 :: Industrial (EPLAN, PLC) 1 goal · 3%
Starves: —

5 :: KiCad export 0 goals {no goals for a full cycle}
Starves: —

Re-rank (in a review) 3

Drag "Unit cost per job" above "Canon quality bar"

REASON (REQUIRED)

Pricing needs unit cost before Q1.

Ranks stay unique; there are no ties. 4

Save rank

Starvation check

Rank 1

Rank 2

Rank 3

Below cut

Concentrated at the top. No peanut butter. 5

Retire entry...

+ Add priority

- ANNOTATIONS
- 1

Each entry says what it starves, with its mapped goals and share of linked work.
- 2

The cut line is explicit. More than 4 entries above it raises a lint.
- 3

Re-ranking is drag plus a required reason. By norm it happens in a review, so outside one it shows a soft warning.
- 4

No ties, by construction: dragging only reorders.
- 5

Starvation bars come from linked goals and work items (SPEC §8.3).

TENETS APPLIED

Low friction: reorder by dragging instead of typing rank numbers. The starvation report sits beside the list, so you don't open a separate report.

OPEN QUESTION

Is re-ranking outside a scheduled review blocked, warned, or allowed? It's a norm, so it probably shouldn't be blocked.

Invariant breaks

Lints

Mine

RECORD	PROBLEM	KIND	OPEN SINCE	FIX
GOAL -55 Q4 web refresh	Ambition date with no Promotion Milestone (created via API)	Invariant2	2 d	Draft waiting Review
GOAL -40 Reduce canon review time	PTG missing RED trigger	Lint	1 review cycle overdue	Open
GOAL -61 Marketing improvements	Summary has no verb	Lint3	5 d	Open
GOAL -12 Launch self-serve runs	Health unchanged 21 days while RED	Stale health	6 d	Open
PRI-5 KiCad export	No goals mapped for a full cycle	Lint	30 d	Retire...

hygiene-agent fixed 3 safe items this week (e.g. normalized a work-product URL). Each fix is an Event.4

- ANNOTATIONS
- 1

Every rule break and lint, never hidden. Each row is a link to fix it.
- 2

Invariant breaks can only come in through paths that bypass validation, such as imports. Each gets a Draft fix for the owner.
- 3

Lints are norms. They're flagged here and never block a save.
- 4

Safe fixes are applied by the agent and recorded as Events, so a person has nothing to do.
- TENETS APPLIED
- Remove steps:

the agent fixes what's safe, so the human queue holds only real judgment calls.

17

Prepare a review: review page and agent pre-read

REDGOAL-12 Launch self-serve runs: milestone missed

YELLOWGOAL-40 Review time: PTG step 2 slipping

Promotions

Due: GOAL-33 (Oct 30) · Missed since last: GOAL-19

Starvation

Factory: 61% at rank 1 · KiCad export (rank 5) has no goals → retire?

Built from the event log. Every line links to its record.

Slips (1)

GOAL-40 Dec 4 → Dec 18 (+14 d)

Status theater (1)4

GOAL-12 GREEN → RED in one step

Approve & send pre-read

ANNOTATIONS

- Each review has a page and a calendar slot. Start review opens review mode (frame 18).
- The review page follows the App. B template, and local agenda changes are recorded on it.
- The agent drafts the pre-read: RED/YELLOW, slips, promotions due and missed, status theater, starvation. A human approves it.
- Status theater gets its own line, since it's the most important diagnostic of the quarter.

TENETS APPLIED

Remove steps: nobody assembles a status deck. The pre-read is generated from the log, and the review owner only approves it.

OPEN QUESTION

Who receives the pre-read and how (in-app only, or email via the M365 tenant)? The spec says pre-reads "go out" but names no channel.

18

Run the review: walk the view line by line

Source: Epic 10 #11 (review mode, decisions and action items as Events); USERS_MANUAL §6; SPEC §9; Epic 7 #8 done-when (run default review end to end in the app)

Owner Tig

Date Dec 18 Committed (orig. Dec 4)

PTG 2 steps · criteria ✓ · RED trigger missing

Plan Pencil (pinned v4)

By when? Committed, ambition, or fantasy? Watercolor, crayon, or pencil? 3

Decisions 4

Send PTG back Promote... Set health... Re-rank...

✓ PTG sent back to Tig: "add RED trigger" (Event #18,233)

Action item 5

Add RED trigger to PTG Owner: Tig Date required

Prev Next: GOAL-47

- ANNOTATIONS
- 1 Shared live session. Everyone in the review sees the same cursor and the same changes within 1 s.
 - 2 Order follows the default format: RED and YELLOW first, GREEN skipped unless raised, then promotions due, then priorities.
 - 3 The habitual questions sit on screen as prompts, not as fields.
 - 4 Decisions are taken in place and each is an Event. The review leaves its trail on the goals.
 - 5 An action item can't be saved without an owner and a date (or a date for a date). *Enforcing this is assumed; the repo calls it a norm.*

TENETS APPLIED

Low friction: the review is the tool, not a meeting about the tool. No minutes, because every outcome is already an Event.

OPEN QUESTION

Is an action item a work item, a goal, or a new record? The spec and #11 call action items Events but define no entity; this affects the data model.

19

Scorecard and GOALIE health (fitness functions)

Committed / Ambition / Fantasy share by week

Period-end scorecard

UNIT	ON TIME	LATE	NOT MET	NO PRIOR COMMIT
Factory	3	1	1	0
Product	2	0	0	1
Operations	2	1	0	0

ANNOTATIONS

1

Fitness-function tiles with their USERS_MANUAL §8 targets. The GOALIE owner inspects them each quarter.

2

Trends over time, all derived from the event log, never typed in.

3

Period-end scorecard by unit, measured against original committed dates.

4

Full export: the organization owns its memory (SPEC §13 item 11).

TENETS APPLIED

Customers own their data; get and use data: the numbers come straight from the log, and export is one click.

Period reset: 2026 → 20271GOALIE owner · 9 open goals

Step 1 of 2

GOAL	HEALTH	CLOSE AS	CONTINUE IN 2027?	NEW DATE TYPE
GOAL-12 Launch self-serve runs	RED	Did Not Meet ▾	Carryover2	Ambition + milestone
GOAL-40 Reduce canon review time	YELLOW	Completed Late ▾	—	—
GOAL-60 Weekly canon quality report	GREEN	Completed ▾	Repeating	Committed
GOAL-23 Ship EPLAN export pack	Backlog	Deleted ▾	Carryover	Fantasy + milestone

REASON PER CLOSE (PRE-FILLED FROM HEALTH; EDIT ANY)3

GOAL-12: "milestone missed Nov 15; carried over with honest Ambition date"

Step 2: set up the 2027 priority lists (copy 2026 list as a draft to re-rank).4

Close 9 goals & create 2 new

ANNOTATIONS

- 1One bulk screen for the year-end close-out, owned by the GOALIE owner.
- 2Continuing work becomes a new goal marked Carryover or Repeating. Nothing carries forward silently.
- 3Each close still has its own reason. Pre-filling one from the goal's state saves typing but stays editable. *The pre-fill is assumed.*
- 4New priority lists start from last period's as a draft to re-rank.

TENETS APPLIED

Remove steps: one bulk pass instead of 9 separate close dialogs, without dropping the one-reason-per-change rule.

OPEN QUESTION

Do pre-filled reasons satisfy "a written reason", or must each be typed by a human to avoid reason theater?

21

Make a view: saved, shareable definition

SUMMARY	STATE	HEALTH	DUE DATE
GOAL-12 Launch self-serve factory runs PaHy	In Progress	RED	Mar 31Ambition
GOAL-40 Reduce canon review time to 10 min	In Progress	YELLOW	Dec 18Committed was Dec 4

Removing the **Date type** column is allowed. Dates then show a ⓘ marker so an uncommitted date never reads as a promise.5

- ANNOTATIONS
- 1

Filters are the spec's selectors: level, org unit, owner, type, severity, priority, date type, health, period.
- 2

The default columns are pre-checked. Fields from linked records (e.g. parent.summary) are allowed.
- 3

Shareable by default (transparent), or private. Favoriting writes the user setting.
- 4

Live preview, so there's no separate save-then-test step.
- 5

Custom views may drop the date-type column. The ⓘ fallback marker is assumed.
- TENETS APPLIED
- Low friction:

start from any view's chips and "Save as view", or build here from defaults. There's no query language (ADR 0003).

22

File and track work items (optional extension)

Source: SPEC §6.7; Epic 12 #12 (work items, intake, GitHub import, evidence for health); USERS_MANUAL App. A step 5

Owner: Tig▼

Due: Nov 15

Link (PR, issue)

Add

Evidence for health4: 2 of 6 items overdue → feeds drafting-agent's next health Draft.

Import from GitHub repo... excaliwire/factory · open issues → work items, linked as Work Product

- ANNOTATIONS
- 1

When the extension is on, work items are the group's list of work under a goal. The tab is hidden when it's off.
- 2

Imported GitHub issues keep their link. This is how factory issues (today's backlog) move into GOALIE.
- 3

Quick-add with four fields. The record deliberately doesn't copy the goal schema: no sprints, no points.
- 4

Overdue and blocked items count as evidence in the agent's health Draft.

TENETS APPLIED

Remove steps: a one-line add and a one-click import, and agents pick up items over MCP. GitHub Issues is retired as the stopgap.

OPEN QUESTION

Can a work item exist with no goal (true backlog intake), or must it link to one? #12 says it "links to a goal"; Excaliwire's backlog today has many unlinked issues.

Hard rules. GOALIE enforces these; you can't turn them off.

1. Every goal has exactly one human owner.

2. Every goal has a date and a date type.

...

Defaults for Excaliwire 1

- Plan period: calendar year ← from Owner settings

- Promotions due window: 2 weeks ← from Owner settings

- <who may correct an Original Committed Date> ▲ blank

Draft changelog entry by manual-agent 2: "Promotions-due window 2 → 3 weeks (owner setting changed Oct 2)".

Approve

Linked from every default view (footer ⓘ) and from New goal. 3

Agents load this same Doc over MCP as their instructions. 4

- ANNOTATIONS
- 1

Configured values are filled in from owner settings, and unfilled <...> blanks are flagged.
- 2

When configuration changes, an agent drafts the changelog entry and the owner approves it.
- 3

Reachable from every default view and from goal creation.
- 4

The manual is the agents' rulebook too (an MCP resource). There's no second copy to drift.
- TENETS APPLIED
- Low cognitive load:

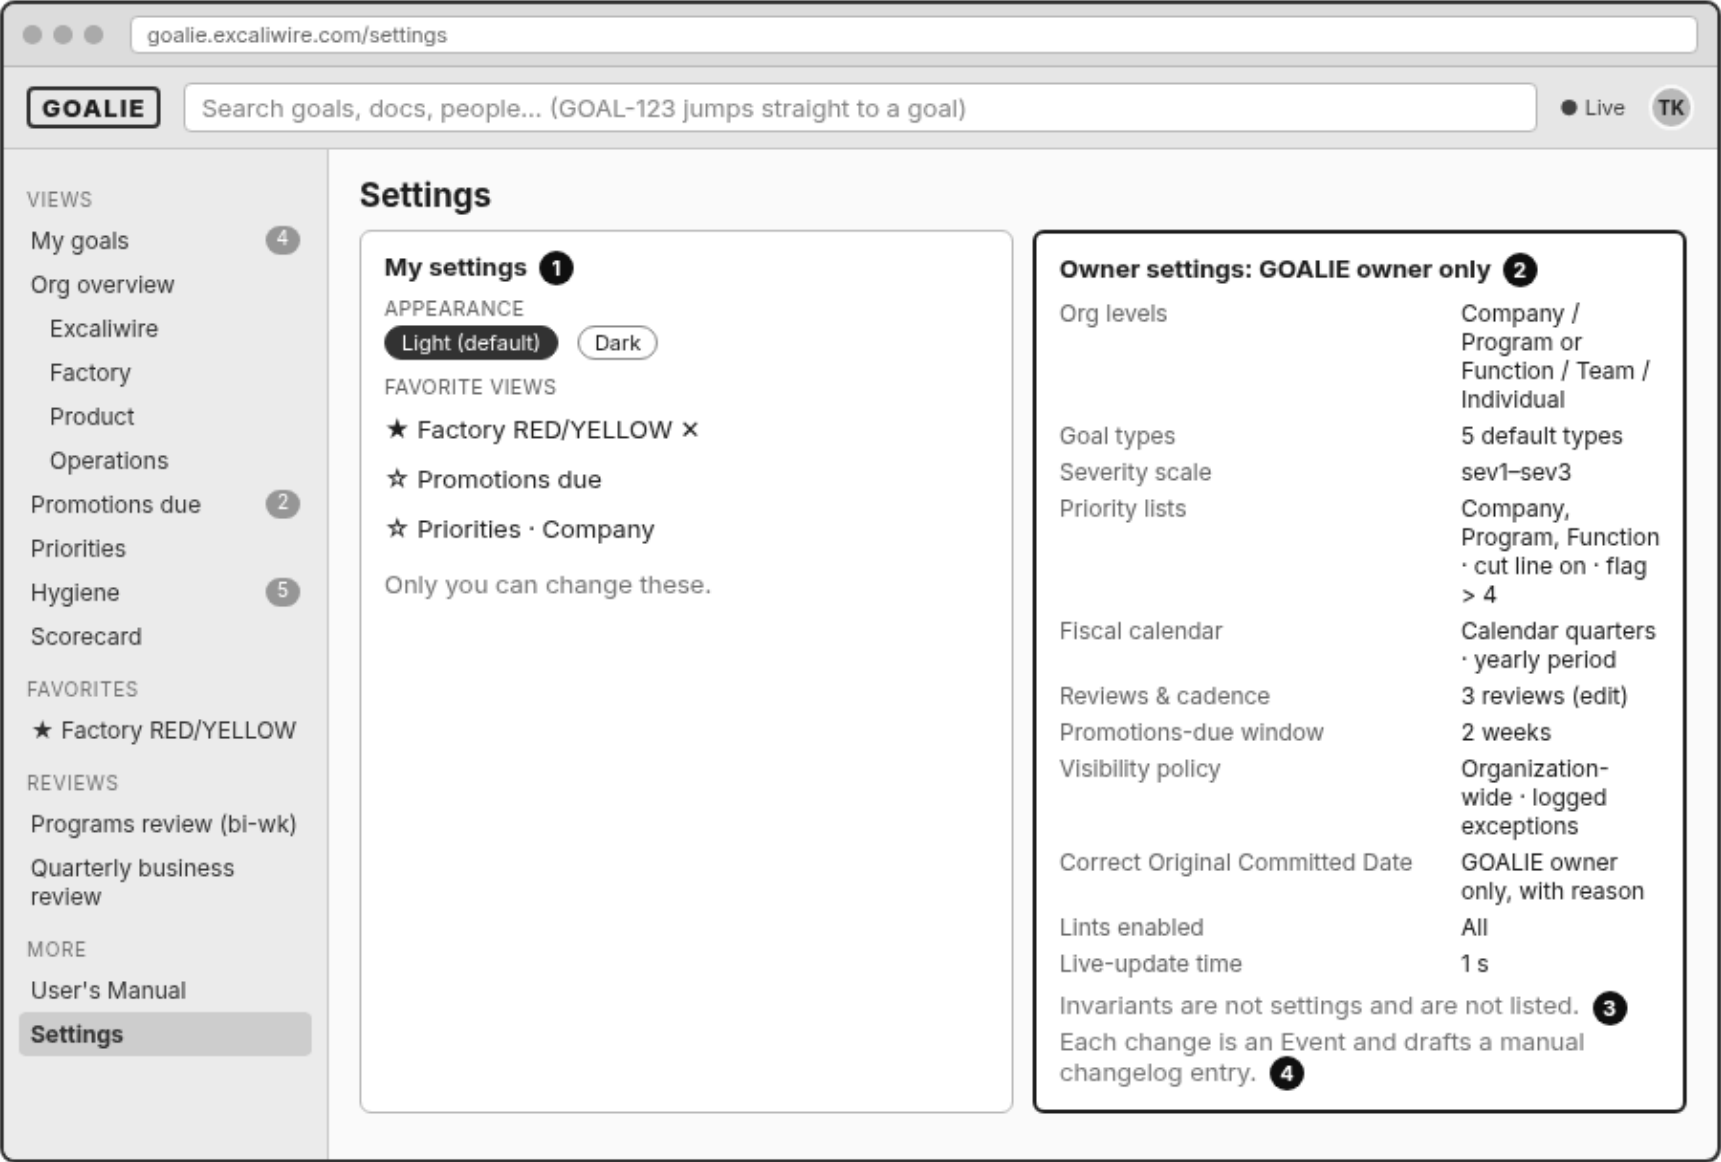

the manual is short and one click from where you work. Config and manual can't drift because one writes the other.

Settings: my settings and owner settings

Source: SPEC §12 (owner vs user settings); ADR 0011; Epic 7 #8 (user settings); Epic 13 #14 (all settings without touching code)

Web app · desktop

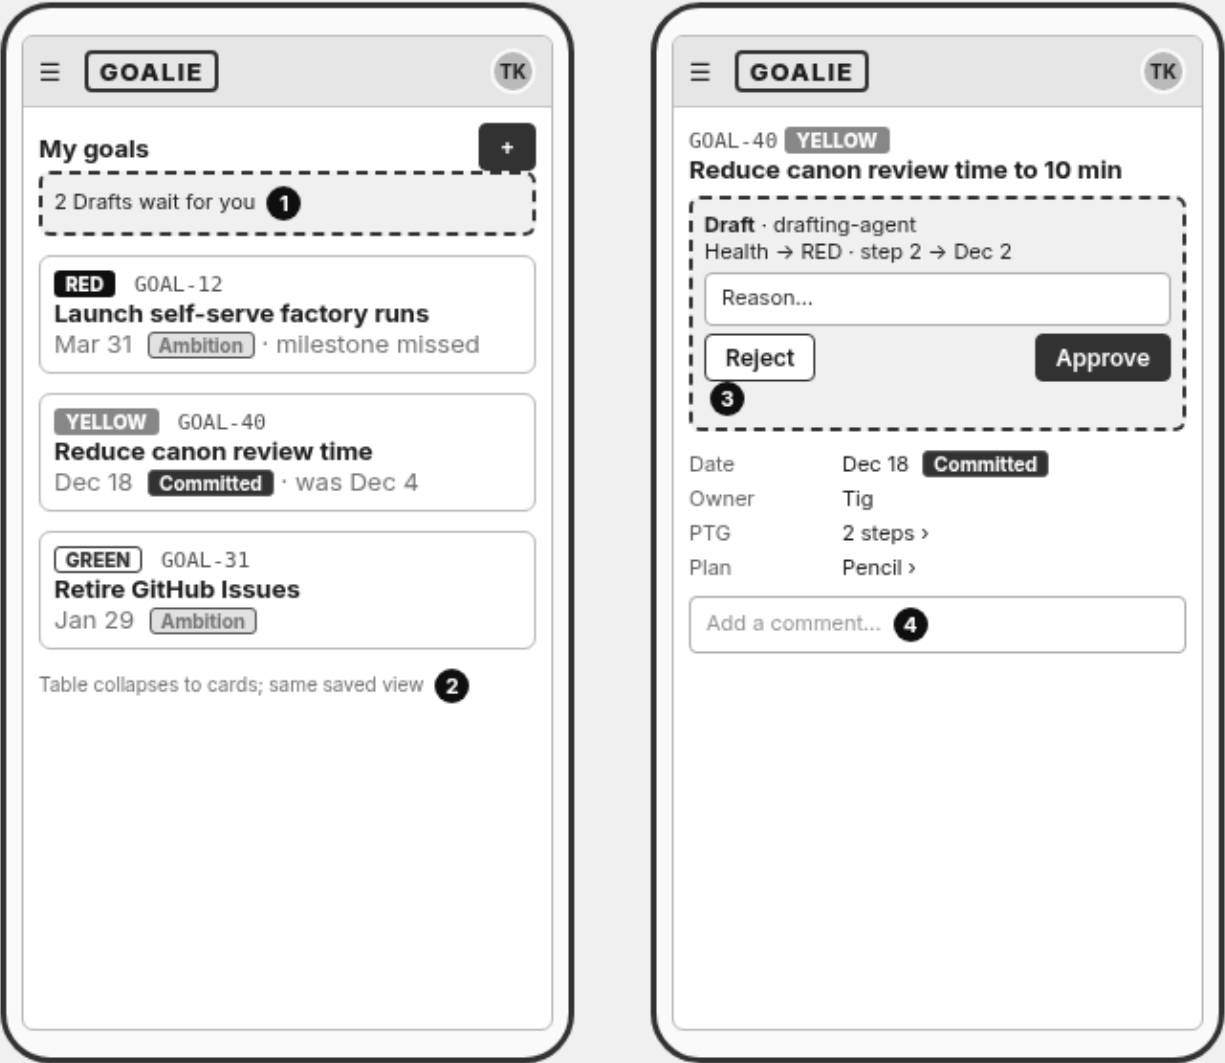

- ANNOTATIONS**
- 1 User settings are just appearance and favorite views. Each user sees only their own.
 - 2 The owner panel only renders for the GOALIE owner. Everyone else doesn't see it at all.
 - 3 Invariants never show up as toggles. Turning one off would mean it isn't GOALIE.
 - 4 Owner changes are logged and flow into the manual's changelog (frame 23).
- TENETS APPLIED**
- Low cognitive load:** two settings for users. Everything else is a sensible default owned by one person.

25

Phone width: My goals, approve a Draft, comment

Source: ADR 0010 (one web app; same pages usable at phone width; no native app); SPEC §1 (web and mobile); Epic 7 #8 (accessible, phone-sized)

Mobile web (phone browser)

- ANNOTATIONS
- 1 The phone is for triage: Drafts waiting, RED and YELLOW first.
 - 2 The same server-rendered saved view, laid out as cards. No second codebase.
 - 3 Approve or reject a Draft with a reason in one thumb flow.
 - 4 Comment and quick field edits work. Long plan editing works but is secondary.
- TENETS APPLIED
- Low friction: no app install and no separate login. It's the same URL in any phone browser.
- OPEN QUESTION
- What's the mobile scope: triage only (approve, comment, health), or full parity including priority re-rank and plan editing?

26

Agent surface: an agent works GOALIE over MCP

Source: Epic 5 #6 (MCP tools for each App. A how-to; Drafts; comments; errors name the rule; manual as resource); ADR 0004, 0005, 0007; SPEC §1.1, §10, §13 items 8, 21-22

Agent · MCP (CLI/chat)

terminal · agent session

Claude Code · connected MCP: goalie (Streamable HTTP · actor: drafting-agent, op. Tig) 1

> Track GOALIE's Stage 2 as a goal under Factory, ambition Feb 27.

● goalie.create_goal(summary="Ship GOALIE Stage 2", org_unit="factory", owner="tig", type="Milestone (Launch)", due_date="2027-02-27", date_type="Ambition", base_version=null)

✗ rejected: invariant promotion-milestone-required (SPEC §5): an Ambition date needs a Promotion Milestone with a Committed date. 2

● goalie.create_goal(... , promotion_milestone={summary:"Commit Stage 2 date", due_date:"2026-11-20", date_type:"Committed", owner:"tig"})

✓ GOAL-70 created (v1) · GOAL-71 milestone (v1) · events #18,301-#18,302

> Our PR #44 slipped. Update health.

● goalie.read_resource("goalie://manual") # loads rules from the User's Manual 3

● goalie.create_draft(entity="GOAL-70", base_version=1, change={health:"YELLOW", path_to_green:{steps:[...], criteria:"...", red_trigger:"..."}}, reason="PR #44 open 9 days; 2 failing checks")

✓ Draft #91 created · visible on GOAL-70 · not in effect until Tig approves 4

● goalie.subscribe(after_sequence=18302) # same SSE stream the views use 5

... #18,319 Tig approved Draft #91 · "agreed"

Same moment in the app:

GOAL-70 · Draft by

Dr

 drafting-agent (op. Tig): health → YELLOW, PTG 3 steps ·

Review Draft

 6

ANNOTATIONS

1

The agent signs in as its own actor (Entra app token) with a named human operator.

2

Errors name the broken rule, so the agent corrects itself without a human.

3

The User's Manual is the agent's rulebook, loaded as an MCP resource.

4

Agents propose changes as Drafts, and only a human can make them take effect.

5

Agents subscribe to the same change stream as the views and resume by sequence.

6

The Draft appears live on the goal in the app within 1 s (frames 02, 04, 10).

TENETS APPLIED

Autonomous end to end: agents do the bookkeeping, and humans make only the promises. API and MCP come first in build order (#1).

OPEN QUESTION

Which agent actors does Excaliwire register first (drafting, hygiene, review, manual), and who is each one's operator? USERS_MANUAL §3 leaves <list agents and operators> blank.
